

Your employee is interested in learning new skills with AMA. Beyond helping you both achieve your goals, here's why that's an excellent idea.

AMA Seminars offer your employee:

- **Extensive practice in a supportive environment.** You really can't learn new skills from an app. You need to experience it, practice it, and get personal attention to the details that make a difference. There is simply no substitute for learning by doing.
- **Feedback from experts.** Our instructors are not professors—they are practitioners in the field, focused on what works now in the real world. Participants agree instructors make a difference and have rated our faculty 4.83 out of 5 stars. What's more, your employee will be learning alongside peers from other organizations gaining insight and knowledge from other industries and expanding their professional network.
- **Tools and techniques designed to improve performance.** Our courses are instructionally designed to make a difference in performance, which is why 99% of participants report they are using what they learned back on the job after taking one of our courses.
- **An Experience.** Yes, we know two or three days seems like a lot. But dedicating that time to truly master new skills is worth the time and money. And we're not just saying that—our customers agree: 98% of participants would come back for another course.

Still feel like you can't spare your employee for a training session?
Take a look at [our live online courses](#) which minimize time away from work.

Either way, remember that we don't lecture—we accelerate performance.

SharePoint 2013 for Business Intelligence

Enable decision makers to see data in new and dynamic ways.

Companies today generate enormous amounts of valuable information, but often have poor reporting capabilities—inhibiting the sharing of key data. Now, you can provide insights into that data through state-of-the-art business intelligence solutions built on the SharePoint 2013 platform, lower costs and improve operational efficiency. BI has never been more accessible!

This course is packed with hands-on labs to teach you everything you need to know to implement BI solutions using Excel Services, SQL Reporting Services, Analysis Services, PerformancePoint, Power View, PowerPivot, and other web parts and tools that are part of the SharePoint platform. You'll create impressive dashboards, reports, and other business intelligence solutions. Leave with the knowledge and everything you need to build an implementation plan. Plus, make better decisions and provide strategic information to the entire organization with the solutions you build.

How You Will Benefit

- Understand SharePoint's full feature set
- Find out how to build Excel services solutions
- Integrate SQL reporting with SharePoint to build dynamic reports and share data
- Implement scorecards, dashboards, and KPIs using PerformancePoint and implement out-of-the-box BI web parts
- Analyze data with PowerPivot
- Integrate data from multiple external sources with business connectivity services
- Build interactive dashboards that support filtering, reports, KPIS, scorecards and more
- Learn best practices for implementing effective, high-performing BI solutions
- Discover how to use the BI center template
- Implement PowerView and provide intuitive ad-hoc reporting
- Work with the SQL server BI development studio
- Visualize your data with engaging, state-of-the-art graphics
- Enable social decision making through real-time collaboration features

What You Will Cover

- Understanding business intelligence and changes from SharePoint 2010

to 2013

- Understanding the BI options and getting a data security overview
- Developing, deploying and managing reports with report builder
- Learning Power View designer and components
- Becoming conversant with KPI web part, filter web part and chart web part
- Using Excel services to create reports and applications
- Creating a PowerPivot gallery and report
- Developing Visio services diagrams
- Using PerformancePoint services to develop reports, scorecards and dashboards
- Integrating external data into SharePoint

Who Should Attend

Database managers, project managers, business analysts, business intelligence architects and consultants and SharePoint developers and administrators with a basic understanding of the SharePoint interface and database reporting tools will benefit from this course.

Schedule

- [3] days - \$1,995 Non Members
